

Project: Kids Planet Nurseries Davenport

Product: Nearlygrass 30

Kids Planet Nurseries Davenport

Kids Planet Nurseries are responsible for the care and education of over 10,000 children across 82 sites in the UK, and are fully committed to provide a unique environment in which children are actively encouraged to explore, learn and interact with others.

When the Davenport site wanted to completely redesign their outdoor area to house nothing but natural features, they contacted Newby Leisure, Natural Playground Design & Build Specialists. Their experienced design team worked with the staff at Kids Planet to redesign their outdoor space to encourage role-play and push learning through play whilst children participate in outdoor teaching and learning.

As part of the design which included a stage area complete with seating, a reclaimed clamber tree to encourage children to climb and crawl and a shelter, the majority of the outside area was to be resurfaced. The previous surface was tired, dirty and didn't provide the children with a safe surface to protect against impact. With a natural look required as part of the overall design that would provide comfort should they fall, Playrite's Nearlygrass 30 artificial grass was specified to complete the project.

Playrite's Nearlygrass collection has the look, touch and feel of real grass, whilst providing a hard wearing and durable surface which is an ideal solution for use with any school or nursery setting. Ensuring that outdoor play can take place all year round

without the prospect of bringing the muddy outdoors inside, it is easy to maintain and keep clean. Not only is it soft to touch, if children fall, they will be supported by a cushioned surface.

Ashley Spink, Sales and Marketing Manager from Newby leisure, commented "Having worked with Playrite products on previous projects, we asked them to specify their most appropriate product for our client". Ashley went on to say "The Nearlygrass products perfectly complement our designs, and visually enhanced the space to create a realistic grass surface that's ideal for schools and nurseries. We wouldn't hesitate to use Playrite surfaces for future projects".
