A natural alternative to artificial grass.

Playrite aim to achieve and maintain market leadership in the sports surfaces market, by providing quality products and service of excellence through the constant development of people, products and processes.

This will be achieved by operating an efficient & effective Quality Management System in compliance with ISO9001.

Continuous Quality Improvement is achieved by empowering employees to take responsibility for the quality of their work, and establishing and reviewing relevant objectives and targets.

Our Company policy is to review and update the Quality System and ensure that the Quality Policy is understood and implemented at all levels of the Company.

TO BRING YOU THE BEST SURFACES FOR ANY SPORT

A UK family owned business dating back to 1873, National Floorcoverings is a company steeped in heritage and tradition. Twenty five years ago, Playrite branched out as its own division to fulfil a niche in the market for a company to develop, design and manufacture surfacing for sports and leisure. Today we are the only UK company to manufacture needlepunch, tufted and woven surfaces all from our home in the beautiful Yorkshire countryside.

Experts in all areas of flooring

Playrite are a division of National Floor Coverings a group of companies with a combined expertise in all types of flooring.

Why choose us

- A trusted UK-based manufacturer of surfaces for sport, play and leisure.
- Established for over 25 years we offer choice, quality and performance.
- Our company has ISO9001 and ISO14001 quality standards.
- Our products are accredited by sports governing bodies and European standards for outdoor sports.
- You will find our products being used across the world on a daily basis.

OUR MANUFACTURING PROCESS

Needlepunch is a wholly fibre based product, where layers of fibre are needled together to create a pile to suit the individual sport. The unique benefits of the needlepunch surface are maximum porosity within a sports surface product, durable and hardwearing with a minimum sand content. This low sand content makes for lower maintenance costs and overall lower costs over the lifespan of the surface compared to other synthetic sports surfaces. With strong seam strength and adhesion to the surface this product is ideal for all types of sports and for installation into numerous establishments.

Tufted is a dual component surface created by punching fibre through a primary backing to create a U shaped tuft. For stability and performance, all tufted carpets require an infill, either sand, rubber or a combination of both which will require regular maintenance to enhance their performance standards. A tufted carpet is the only option for football and rugby as it creates a longer pile surface to match the performance criteria of football, rugby and GAA. Aesthetically, it is nearer to a natural grass look and is illustrated in our Nearlygrass range.

A **Woven Surface** is created by weaving the backing yarn and pile yarn together as one. This method of construction offers a highly stable, non-directional, non-infill product with extreme porosity parameters and integral strength. The major benefits of a woven surface are its non-directional pile, giving consistent ball roll and strength throughout the whole product.

SAVE, PITCH, TACKLE, BACKHAND, CORNER, MULTI-USE SURFACES

Many of our multi-sports synthetic surfaces have been installed into schools, universities and sports clubs throughout the country and are an excellent choice when an organisation needs to get the most out of their facilities.

We currently manufacture a range of highly accredited sports and playing surfaces, each one offering a highly engineered surface.

By choosing a multi-use games area for your facility, you can offer a wider range of sports and extra-curricular activities. All available with a manufacturers warranty as well as a UV warranty.

Multi Use Game Areas (MUGA)

are the perfect solution when faced with a shortage of space or limited funds. Available from Playrite in both needlepunch and tufted construction.

Our expertise, your benefits

- Versatile and hard wearing.
- Manufactured in a range of fibre options to suit.
- Available in a range of colours.
- All meet EN15330 standards.
- Meet various governing body accreditations.
- CAD visualisation of pitch and line markings available.
- Products available: Grandplay, Tournament EL, Matchplay 2, Tournament MF, Conqueror 40 and Matchwinner Velour.
- Optional shockpads available.

How to choose a (MUGA)

The way that your MUGA is made will depend on a number of factors. The most important one is the combination of different sports you intend to play on it. There is no one type of synthetic sports surface that suits all sports equally. However, we have a wide range of surface options and the expertise to help you select the one that's best for your needs.

From our factory in West Yorkshire we manufacture needlepunch, woven and tufted surfaces. These are all slightly different manufacturing processes, but all are backed by a minimum 5-year warranty and all surfaces are UV stable pending on the surface you choose, there may also be a sand or rubber infill (or a combination of the two) to give a more realistic feel.

What is (MUGA)

As the name suggests, a multi-use games area is one that can be used for a variety of different sports and activities. Understandably, they are becoming very popular with sports clubs, schools and other organisations that have limited facilities and need to get the best possible use out of them.

A MUGA will consist of an artificial, all-weather sports surface made with synthetic materials, which will typically include multiple pitch markings for different sports. Those pitch markings are colour-coded to match each sport. For example football markings may be one colour whereas hockey, netball and basketball markings are all different again. A MUGA is suitable for year-round use.

FIND OUT MORE

What you need to consider

There are many things to consider when installing a MUGA, and the following are some of the more important ones:

- **Surface** - For MUGA installations, we offer 4 surface options. Tufted surfaces with a high pile are best for football and rugby, as they accurately recreate the feeling of a natural grass surface. However, for small ball sports such as hockey and tennis, a shorter pile tufted surface or needlepunch may be more appropriate. We will discuss your requirements with you to ensure that you find the right surface to meet your needs.
- **Maintenance** - Artificial surfaces are cheaper to maintain than natural grass pitches, but you should still consider how you will manage the upkeep of the pitch and choose a surface that you can realistically manage to maintain. We can advise you on the type and level of maintenance required for each of our surfaces.
- **Cost** - Budget will of course be a key consideration. With our range of MUGA surfaces, we can give you a number of different options to choose from in order to meet your budget.

Conqueror 40

Conqueror 50

Conqueror 60

KICK, PASS, GOAL, BOOT, HEADER, SAVE, FOOTBALL SURFACES

This synthetic all-weather solution plays just like the best natural turf pitches, but with much lower maintenance costs. In-filled with sand and rubber granules to maintain a professional playing standard, we recommend regular maintenance. To preserve playing performance over a longer period of time we recommend a shockpad is incorporated. All of our tufted 3G products are classified to FIFA equivalent, being International Match Standard (IMS).

[FIND OUT MORE](#)

Tested to International Standards

Offering exceptional ball bounce and roll characteristics, great ball control and maximum comfort underfoot, there's a tufted 3G surface from Playrite to meet any requirements.

Tested to IMS

The International Match Standard and FIFA quality are technically identical and all the testing procedures and requirements of a FIFA quality certified field also apply to IMS fields. Official testing to the International Match Standard shall only be carried out by independent test institutes accredited by FIFA. The International Match Standard is not a product approval scheme, but is the certification that individual football fields have the required playing characteristics and have been constructed from materials of known quality.

Our expertise, your benefits

- Manufactured using a range of fibre options.
- Available in different pile heights from 40mm up to 60mm.
- Classified to FIFA performance equivalent IMS classification.
- FIH accredited.
- Meet EN15330 standards.
- Products available: Conqueror 40/50/60.

SERVE, LOB, VOLLEY, CHIP, NET SMASH

TENNIS SURFACES

Offering comfort underfoot as well as the surface's ability to take spin and slice, you're sure to find a product to suit your needs from our extensive tennis surface portfolio.

From our indoor tennis surface to our industry leading outdoor clay court simulating product. Our surface engineered porosity system allows all-weather usage to maximise playing time and revenue potential. Our surfaces are also suitable for padel courts.
