

Project: Burnley High School

Product: Tournament MF

Burnley High School

Burnley High School has a distinctive vision to use an ambitious curriculum to support and enrich their students with opportunities to help them discover their passions and talent.

One aspect of the school's ethos is for students to engage in competitive sports and activities to encourage them to lead healthy and active lives. However, like many educational facilities in the UK, the school did not have access to an outdoor area all year round.

The school wanted to create a Multi-Use area for students to use all year round however, the main challenge was where they could do so that would be located near to the school's existing facilities.

Much of the school is surrounded by uneven grass and tarmac areas used as an overflow for car parking. After an assessment the school decided a section of the overflow car parking would be ripe for renovation.

It was decided that installing an artificial grass surface would give the school an area that could be usable all year round, with minimal cleaning maintenance required, all whilst within the allocated budget. Working with the school's chosen contractor EB Sports and the team at Playrite the school decided to install a MUGA Surface as it allows pupils to engage in a range of

sports and activities including football, hockey, netball, tennis, basketball and much more.

Mark Bucknall Director at EB Sports has previously collaborated with the experts at Playrite and were familiar with the range of MUGA products available. After a site visit EB Sports were able to establish that Playrite's Tournament MF surface would be the perfect match.

Tournament MF is a superior quality sand dressed tufted surface, designed with its unique texturised monofilament fibre to offer durability and comfort underfoot.

Tournament MF provides an excellent playing surface for sports such as hockey as well as being suitable for multi-sport use unlike artificial turf products, our MUGA sports surfaces are considered to be far more resistant to frequent wear and tear.

Since the MUGA surface has been installed, the school has been able to continue to play a variety of sports during the winter months.

They have been thoroughly impressed with the outcome of the installation and are looking forward to continuing to offer their students more sports and activities during the Spring and Summer months.
